Alan –

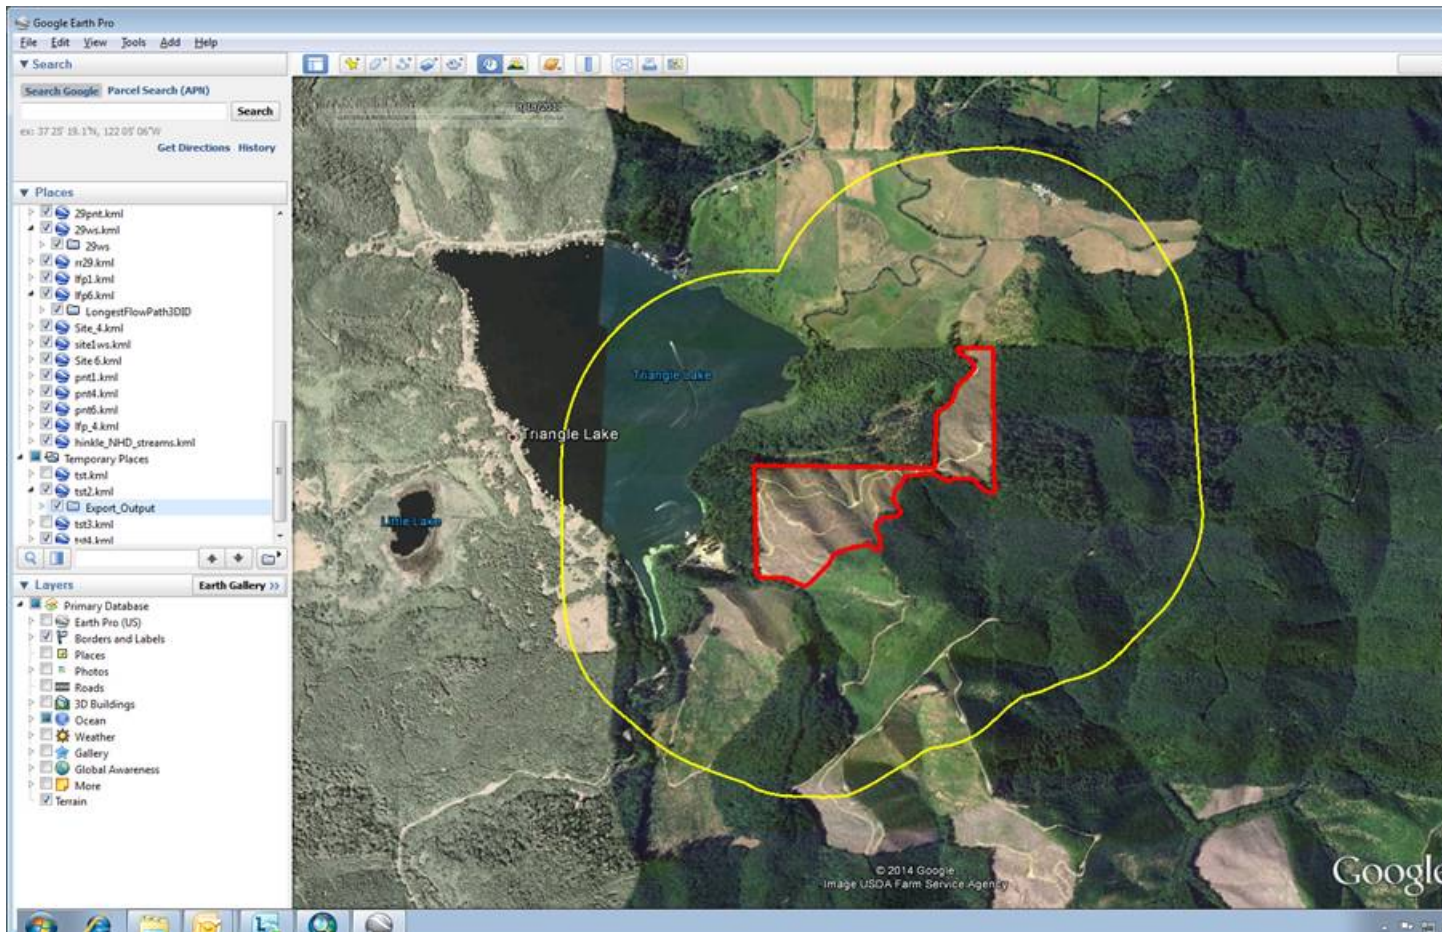

The files he sent were 2010 clearcuts and a 0.5 mile buffer of the 2010 clearcuts. He also sent out buffers for the 2011 clearcuts – **but he did not include the 2011 clearcut dataset did not come through**. Can you ask him for the 2011 clearcuts shapefile again.

Also, do you know of the significance of the 0.5 mile buffer file?

Do we assume that spraying occurred throughout the entire clearcut?

Finally, do we have any idea where we can get the type N stream file?

Peter,

Attached are the shape files for the clearcuts around Triangle Lake. I am not sure if we will be getting the spray information. We can still overlay the cuts with Type N streams. Give me a call if you have any questions.

Alan,

Here are the GIS shape files for 2010 and 2011 clear-cuts. It should be possible to match these up with the records you will get from ODF to figure out what chemical was sprayed here.
